Binley Wood Industrial Estate, Coventry

Coating System Used: SCL95 Cladding Finish & SCL90 Durathane

Before

Before

Before

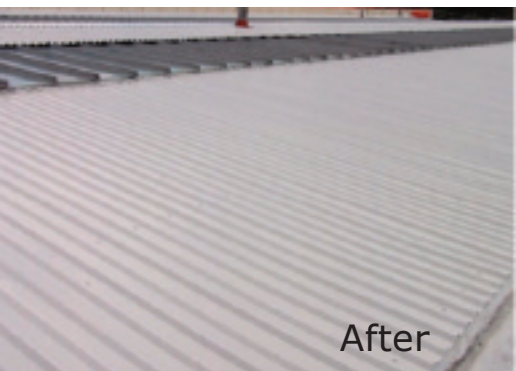

A major refurbishment of an 8500m² industrial unit in Coventry has been completed with SCL 95 Cladding Finish, one of the many specialist coating systems from Seamless Coatings.

KJW Properties Limited approached Seamless Coatings with the task of putting forward a system that would meet their clients' needs which was a total refurbishment of the premises. The exterior metal sheets and gutters of the unit had started to break down to bare substrate causing the building to appear run-down and neglected. The solution also had to provide long-term weather protection for a minimum of 10 years.

SCL 95 Cladding Finish and SCL 90 Durathane were evaluated as the best systems for this project.

Prior to refurbishment Seamless Coatings conducted a site survey which involved thoroughly testing the existing substrate to ensure the recommended system was fully compatible.

Contract for the materials was awarded and the project completed in August 2012.
